AMASA

Dev Test

Please clone this page - Time for this should be 15mins

Explain how you would copy/clone/ripp this page and make it work on your local environment

1.a) Explain your method?

1.b) How you would minimize the errors?

1.c) If you would need to eliminate a scripts explain why

1.D) If you would replace scripts explain how & why

1.e) Clone the the page
https://www.beautystatcosmetics.com/en/pre-6.html

2) There are three different sizes of browser; desktop, tablet and mobile.

Please check out the images below which represent desktop, tablet and mobile respectively.

Please complete them in one single responsive HTML structure, note that you are freely to use any css frameworks

3) Here is a free API, build a simple site/app where a user can search an artist by using keywords.

Then if the user clicks on the Artist, it will display It's album list plus any other information you want to show.

https://www.theaudiodb.com/api_guide.php

You don't have to implement all features available for this API project!
You are free to choose the ones that could show your skills.

Be creative!
